

MAKROPUR 290

MAKROPUR 290 POLYURETHANE BASED INJECTION

A fast and permanent polyurethane injection solution against water leaks.
Makropur 290 is a two-component polyurethane injection system that reacts with water. It reacts quickly to create a strong sealing barrier in high-pressure water leaks, concrete cracks, joints, and ground voids. It can be safely used in many structural reinforcement applications, from tunnels to foundations.

Areas of Application

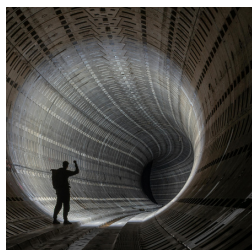

WATER LEAK REPAIR

It quickly and permanently stops high-pressure water leaks.

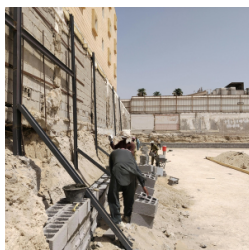

CONCRETE CRACKS AND JOINTS

It provides effective sealing in cracks, gaps, and joints.

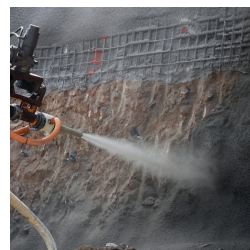

TUNNEL INJECTIONS

It is used for waterproofing and consolidation purposes in tunnels and underground structures.

RETAINING WALLS

It supports the structural integrity by preventing water ingress.

SOIL STABILIZATION

It is used in void filling and ground reinforcement applications.

FOUNDATION AND CURTAIN WALLS

Curtain wall injection provides waterproofing and structural protection.

Your Dependable Partner in Chemical Solutions

At Makro Chemical, we enhance your production processes through our extensive product portfolio, which includes industrial raw materials and specialized chemical solutions, supported by our expert technical team.

We are prepared to be your strategic partner in solutions.

At Makro Chemical, we enhance the production processes across diverse industries through our premium chemical raw materials and technical expertise. With a dependable supply chain, a customer-centric approach, and comprehensive technical support, we are committed to delivering the most appropriate solutions to meet your requirements.

Please reach out to us for comprehensive information regarding our products, to seek technical guidance, or to explore our tailored solutions.
